Butterfly Lash Solutions’ Eyelash Extension Evaluation Theory Exam

QUESTIONS

1. **What is used to bond the eyelash extensions to the natural lashes?**
   a. A water based adhesive that bonds the lashes for at least 6 months, with no refills necessary
   b. Hair extension glue, which can also be used effectively with the lashes.
   c. A cyanoacrylate based adhesive with a bonding power of 4 to 8 weeks. It is humidity and temperature sensitive – bottle needs to be kept at room temperature away from the light. The adhesive is made for lashes only and should never get into the eyes or on the skin as it is a membrane irritant. If it gets into the eyes, the technician needs to rinse the eye with a saline solution and send their clients to get immediate medical assistance.
   d. All of the above

2. **What are signs that the adhesive should be replaced?**
   a. It has been over 3 months since the purchase date of the adhesive
   b. The colors are beginning to separate into black, clear, and opaque
   c. It is thick and gooey
   d. It is COMPLETELY DRY inside the bottle
   e. All of the above

3. **What causes eyelash extensions to fall off in large amounts within a time span of 2 weeks?**
   a. Oil based products are used around the eye area
   b. Rubbing the lashes and/or pulling at the lashes
   c. Playing with the lashes
   d. All of the above

4. **A client has a reaction to your eyelash extension service following the procedure. Her eyes are swollen shut and she calls you for help, what do you do?**
   a. Panic. Then call Butterfly Lash Solutions, claiming that the adhesive was the problem
   b. Have the client call her physician immediately
   c. Have the client take Benadryl immediately to calm the reaction, breathe, and assess the situation. Did I follow all sanitation procedures? Did I check beforehand whether she had any allergies or contraindications? Did I apply the lashes too close to the skin? In any situation, have the client take a Benadryl. Explain that she is having an allergic reaction and that you prefer not to remove the extensions being that she is already reacting to something and you don’t want to use yet another product. Reassure her that the reaction will subside and that the lashes will fall out naturally. If she still insists, have her take a Benadryl and remove the lashes accordingly, but most clients, once explained, understand and will agree not to have them removed.
   d. All of the above
5. Which of the following best describes the styles, curls, lengths and thicknesses of Butterfly Lash Solutions’ LASHES?
   a. Lashes are available in 4 curls and 4 thicknesses: J, B, C and D Curl, and in the following thickness: 0.10, 0.15, 0.20 and 0.25mm
   b. Colored lashes are also available
   c. Faux-Mink Lashes are popular for their comfort level, darker, softer and lighter in weight.
   d. All of the Above

6. Butterfly Lash Solutions’ eyelash extension adhesives can be stored in the car, in high heat, near a window, or left outside between services. They also do not expire for 3 months after purchase.
   a. True
   b. False

7. Qualities of a great full set or refill include: spaces between the lashes, uneven shape, and incredibly thick lashes applied to frail and thin lashes.
   a. True
   b. False

8. Eyelash Extensions should be applied as follows:
   a. Touching the lids of the client
   b. Leaving a minimum of 1 to 2mm from the lash line of the client.
   c. Anywhere near the eye area
   d. All of the above

9. How long do lash extensions last? When applied properly, lash extensions can last indefinitely as long as you come in for fills every 3 to 4 weeks. This is required as your natural lashes shed; therefore it is necessary to fill in any new growth. When you come in for regular touch ups, you should normally have at least 50% to 75% of your eyelash extensions still attached.
   a. True
   b. False

10. Eyelash Extensions should be applied as follows:
    a. One synthetic to one natural lash at a time.
    b. One synthetic on more than one natural lash at a time
    c. More than one synthetic lash can be applied to one natural lash
    d. All of the above

11. A Full Set should always contain at least 80 to 100 lashes per eye. With regular fills, an average client leaves with 80 to 100 lashes per eye.
    a. True
    b. False
12. Once I practice and develop the necessary skills to be an excellent lash technician, it should take me less than 2 to 2 ½ hours to apply 80-100 lashes per eye.
   a. True
   b. False

13. How long do fills/touch ups usually take and how often does a client need to come in for them? Appointments should be approximately 45 minutes to 1 hour. Clients should come in every 3 to 4 weeks for a fill.
   a. True
   b. False

14. What percentage of lashes typically remains on my clients if they come for fills regularly (every 3 weeks)? They should have at least 50% or more lashes remaining when coming in for a fill.
   a. True
   b. False

15. Individual Faux-Mink lashes are light, flexible and soft. They come in “trays”, lined up in a row. You can get individual sizes or mixed trays.
   a. True
   b. False

16. The most common lash diameter/thickness used is 0.15mm. If I use 0.20mm or 0.25mm diameter lashes on most clients, this will ruin their natural lashes over time since these are too thick and heavy. The majority of clients use .15mm and .10mm diameter/thickness since the diameter/density/thickness is to be matched to their natural lashes. For example if their natural lash is 0.10 mm in thickness, I should apply a 0.10 mm in thickness.
   a. True
   b. False

17. Most common lengths are 8-12 mm long. Length choice is never to exceed 50% above the client’s natural lash. 99% of the time, clients prefer 20 to 30% longer than their natural lashes.
   a. True
   b. False

18. How do I care for eyelash extensions? Eyelash extensions need minimal care. Avoid excessive rubbing, waterproof mascaras, oil based cleansers, oil based lotions or make-up removers, as these will loosen the adhesive and shorten the life of your extensions. Use a micro-brush to fully clean the eyeliner around the eye. We recommend using Butterfly Lash Solutions’ PAPILLON Essential Kit: 1) PAPILLON Oil-Free Cleanser, 2) PAPILLON Lash Serum and 3) PAPILLON Nourishing Sealer. These products will clean, protect and extend the life of your extensions while also nourishing your natural lashes.
   a. True
   b. False
19. An “Essential Kit”, which includes Butterfly Lash Solutions’ PAPILLON Cleanser, Nourishing Sealer and Lash Serum would benefit my clients as well as increase my sales volume.
   a. True
   b. False

20. Butterfly Lash Solutions’ PAPILLON Eye Cleanser does the following: It removes any unwanted dirt, oil and other particles from the lashes. It is 100% oil-free. It will ensure that their lashes are always clean. Many clients who get lashes assume that “if they don’t touch them, wet them, or wash them that they will last longer”. FALSE!!...it is quite the opposite. Your client should wash/cleanse their eyes with an oil-free cleanser daily, if not at least 2-3 times a week to prevent Blepharitis and other issues. Eyelash follicles can become blocked if the lashes are not cleaned as the sebum (oil, dead skin cells and bacteria) on the eyelid block up the natural lash follicle. This can all be prevented with good hygiene. Tell your clients to wash their eyes in the shower. They can apply a cleanser with their fingertips. It is primarily a hygiene requirement, not just a way to remove makeup.
   a. True
   b. False

21. Butterfly Lash Solutions’ PAPILLON Lash Serum has the following benefits: It nourishes your natural lashes enabling them to grow thicker, darker and longer. It transforms frail and brittle lashes. Brush the lash serum onto the root of clean lashes or brows in the same manner as if applying eyeliner, while avoiding the eye area. Full results can take 2-3 months. It is important for lash clients as it will keep their natural lashes strong and healthy so that they can continue coming back for fills indefinitely.
   a. True
   b. False

22. Butterfly Lash Solutions PAPILLON Nourishing Sealer does as follows: It is a coating agent that protects extended lashes from moisture and oil. It should be applied daily and extends the lifetime of the eyelash extensions, while nourishing their natural lashes.
   a. True
   b. False

23. How would you describe your lash work? I would describe my work as very clean, precise, and beautifully designed. This means that the individual lashes are not stuck together and feel comfortable. I mix up sizes and curls to most mimic natural lashes. My clients’ closest friends cannot usually tell they are fake lashes! My studio and work area should appear neat and sanitary as well as myself.
   a. True
   b. False
In-Class Hands-on Training

Perfect technique and safety is our focus during class. We want students to be able to demonstrate that they comprehend the key concepts and that they can perform the technique safely.

Before Application
i) verification of client’s eyes and eyelashes without extensions to ensure that she/he is a good candidate for lash extensions
ii) verification that the consent form is reviewed and signed
iii) Verification that all rules of safety and hygiene are met.

During Application
i) Verification of proper application of eye gel pads and medical 3M tape to ensure safety
ii) Verification that the proper size of extension is selected (density and length) for client’s lashes and lash design
iii) Verification that the upper lids are frequently lifted to ensure that the lower lashes aren’t being caught in the adhesive
iv) Verification that student checks their work periodically to ensure that the lower lashes aren’t being bonded and that the student is able to successfully make corrections when needed (separate lashes that have accidentally stuck together, etc.).

After Application
i) Verification of proper sequence and placement of eyelash extensions.
ii) Ensure that the extensions were placed properly on top of the natural lash, that they were not too close to the skin (leaving at least 1 to 2 mm from the hair follicle and eyelids) and that the adhesive did not come in contact with the skin.
